

Lost Government Laptops Could Be Found ...

PR Newswire - Friday September 22, 2006

STILLWATER, Okla., Sept 22, 2006 /PRNewswire via COMTEX/ -- Since 2001 the United States Commerce Department has lost 1,100 laptops.

The FBI indicates that a laptop is stolen every 53 seconds.

MyLaptopGPS (<http://www.MyLaptopGPS.com>) is a simple and effective way to not only track your laptops, but also to RETRIEVE DATA from laptops even if they are stolen.

The United States Commerce Department would be well advised to install MyLaptopGPS (<http://www.MyLaptopGPS.com>) on all their laptops, and your organization should do the same, that is if you don't want your critical data to fall into the hands of criminals or terrorists and if you ever hope to see your stolen laptop again.

MyLaptopGPS is a complete laptop protection solution consisting of:

- 1) A "Police Trackable GPS" metal tag bonded to the laptop to deter theft.
- 2) Proprietary GPS software that locates a stolen laptop.
- 3) Covert removal of important files at the direction of the rightful owner. Files can be silently removed without knowledge of the thief, and returned securely to the rightful owner.

The theft of laptop computers has been frequent headline news. Here are just a couple recent high profile laptop thefts.

- "Thousands of Hotels.com customers may be at risk for credit card fraud after a laptop computer containing their personal information was stolen from ... "

- "Social Security numbers of 26 million-plus veterans were stolen ... The data were on a laptop and external drive stolen May 3 in an apparent random burglary from ... "

An overview and demonstration of this amazing tracking and recovery technology is available at <http://www.MyLaptopGPS.com> along with purchase information.
